Felix

Apache Felix - Documentation

OSGi Framework and Service platform

Apache license
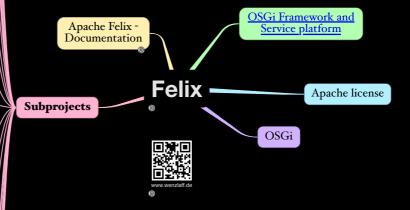

OSGi

Subprojects

- **Config Admin** - An implementation of the OSGi Configuration Admin service specification for managing bundle configuration properties.
- **Dependency Manager** - An API-based component model to simplify OSGi-based development.
- **Event Admin** - An implementation of the OSGi Event Admin service specification for event-based communication.
- **File Install** - A simple, directory-based management agent for managing bundle deployment.
- **Framework** - An implementation of the OSGi R6 core framework.
- **Gogo** - An advanced shell for interacting with OSGi frameworks.
- **HTTP Service** - An implementation of the OSGi HTTP Whiteboard and Http Service specification.
- **Inventory Printer** - A simple and extensible framework to retrieve inventory information about applications running in an OSGi Framework.
- **iPOJO** - A sophisticated service-oriented component model to simplify OSGi-based development.
- **Log** - A simple, memory-based implementation of the OSGi Log service specification.
- **Maven Bundle Plugin** - A Maven plugin to simplify building bundles.
- **Maven SCR Plugin** - A Maven plugin to simplify using Declarative Services.
- **Metatype** - An implementation of the OSGi Metatype service to describe types needed by bundles.
- **OSGi Bundle Repository** - A bundle repository service to simplify discovering and deploying bundles and their dependencies.
- **Preferences** - An implementation of the OSGi Preferences service specification for storing settings and preferences.
- **Remote Shell** - A remote, text-based interface to the Apache Felix Shell.
- **Service Component Runtime** - An implementation of the OSGi Declarative Services specification providing a service-oriented component model to simplify OSGi-based development.
- **Shell** - A very simple shell service implemented as a bundle for interacting with an OSGi framework instance.
- **Shell TUI** - A simple, text-based interface to the Apache Felix Shell.
- **UPnP** - An implementation of the OSGi UPnP Device service specification for UPnP device integration.
- **Web Console** - A simple tool to inspect and manage OSGi framework instances using your favorite Web Browser.
